SQL is fantastic, We can use not SQL languages to compose varity of results, although the language is not very complex.

enhancement themes

SQL Module have a lot difficult for m Because. Some basic SQL knowlede. I have understanding.

Good Notes

I think we should have more practice of all types about SQL, that we could work out more questions. (Learning more examples)

SQL

a little difficult

I found these letures Of important use to web application and database in what I need to know to complete a Dynamic website

---

SQL is very useful modael. I like it because it's active. The teacher is humous

Auite enjoyed the lab Sheets - found working in a team with differing abilities difficult

I like the things that was important for our professor to have a part of exercise on the query in the class. The questions for the tutorials SQL were on the same database of the book Conolly and Beg but different in their formulation. In this way we are able to have a better preparation during the weeks seeing how the query is progress

SQL module is one of my favorite module, Less & Petra not only the great teach. Everything is clear. They gave a lot of practical material, also gave the alternative answer/result. Yes, it is a chalenging module but I like that Now, I am more confidence with sql but still need more practice in DDL & DML

- I prefer to work on my own in labs @ my own pace + have less Collaborative work.

- Also fewer queries + more time going over the solutions

I hope you can put more example in the PPT and more excrses with the answers. And also teach more about SQL in the lecture because the book in the library is a little hard to borrow.

I hope you could give us more SQL questions and solution, we can get more practice.

SQL   MODUL
About the module is good that our professor are also our tutor in the practical part of the modul. I think the book choice of the book conolly Beg and the other one then Elmasri for example is good. Thank to the professors i can have a global idea of the topics of this module
