

12/6

150 hrs  
20 hrs tutorial  
20 hrs practical  
~100 marks!

Tony, Mary, Ian, Donald,  
Almond, Piotr,

# PRF Evaluation

NB - Ian had done some programming before (NB?)  
- rest not

## General

good modules, seemed to have met objectives (all) - having tutorials (lectures) before practical good - could have been more supervised

## Python

- easy to get into (Mary)
- was hard to read of it

## Java

- more familiar name
- more understandable (general)
- too big! (Ian)
- errors difficult to follow (gen)

## Python before Java

- good introduction (Mary) - easier to get started
- easier to experiment with (Donald) - book better
- made more sense after NB (Ian) - done some prog before
- general approval of two languages - learn principles (Mary) - no real problems with transfer - some things to handle in Java

## Other

- some other programming in other modules (scarcely) - seemed to be well prepared enough
- IS and CS different - is programming core to either? (Ian)
- might have been good to introduce some SWE before?
