YEAR IN COMPUTING/KICKSTART LUNCH

Colin Johnson
School of Computing
Schedule

• 13:00-13:30 Introductory Talk
• 13:30-14:00 Lunch and Discussion
• 14:00-14:40 Q&A Session
• 14:40-15:00 Feedback
Add a Year in Computing?

• Year in Computing: a full-time academic year where you study just computing modules.

• Adds one year on to your undergraduate degree—you still do the same amount of your original degree subject.

• You can do this between Stages 2 and 3 of your degree, or at the end of Stage 3.

• The first entry to the Year will be in September 2016.
Why do a Year in Computing?

• Because you want to combine computing skills with your current degree:
  • A social science student who wants to understand how “big data” can be used to understand society.
  • An art student who wants to build new kinds of interactive artworks that need programming.
  • A biosciences student who sees the opportunities in bioinformatics and health informatics.

• Because you want to develop computing knowledge in addition to your current degree.
  • Adding employment-related skills
  • Developing an understanding of how to use computation/tech/data to solve problems
How does this affect my degree?

- The Year in Computing is a pass/fail year.
  - The detailed grades will be on your transcript.
  - Your degree classification will depend on your main degree subject.

- If you pass the year, you will get “with a Year in Computing” added to your degree title.
  - E.g. *BA History with a Year in Computing*

- If you fail, you will drop back to your current degree; you do not risk your current degree by doing the year.
How will the year be funded?

- If you are a UK/EU student, then you will be able to extend your current student funding arrangements to cover the year.
- The fees will be at the standard rate for a year of undergraduate study.
## What subjects would I study?

<table>
<thead>
<tr>
<th>Autumn Term</th>
<th>Spring Term</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>An Introduction to Computer Systems:</strong> Understanding how computers work, from the desktop to the global Internet. (15 credits)</td>
<td><strong>Solving Problems with Data:</strong> Collecting, analysing and portraying data from a wide variety of sources. (15 credits)</td>
</tr>
<tr>
<td><strong>HCI and the User Experience (UX):</strong> Designing information and applications for a wide variety of people (15 credits)</td>
<td><strong>Web Development:</strong> Building and managing large scale, dynamic, web applications. (15 credits)</td>
</tr>
<tr>
<td><strong>An Introduction to Web Technologies</strong> (30 credits):</td>
<td><strong>Project</strong> (30 credits): Putting what you’ve learnt into practice in a larger piece of work, perhaps related to your degree.</td>
</tr>
<tr>
<td>• Presenting information (HTML and CSS)</td>
<td>Draft to be confirmed</td>
</tr>
<tr>
<td>• A general introduction to programming, using Javascript</td>
<td></td>
</tr>
<tr>
<td>• Storing information (databases and SQL)</td>
<td></td>
</tr>
<tr>
<td>• Dynamically generating content for web pages from stored data (PHP).</td>
<td></td>
</tr>
</tbody>
</table>
You will be able to…

- Understand the role of technology and how it is used in the contemporary world.
- Have a good foundational knowledge of coding that is focused on the ideas of programming not just learning a specific language.
- Build dynamic, modern web-based systems.
- Understand how data can be used to tackle complex problems.
- Have a practical grasp of methods for presenting data and designing interactions with computer-based systems.
What do I need to get in?

• We expect you to have an average of 50% in your current modules.
  • We want to know that you are coping with the demands of university study.

• You will need to give a brief description of why you are interested in the Year and what you hope to get out of it.
  • We will follow this up with a brief interview.
  • The aim is to ensure that we are all on the right page; that you know what you are letting yourself in for, that we are confident that you understand what the course contains.

• We do not expect prior computing experience or knowledge.
How to apply?

- Simply fill out the form at

  http://www.cs.kent.ac.uk/ug/year-in-computing.html
Lunch!

- Several staff and students from the School of Computing will be around during lunch—do talk to them about studying Computing here at Kent.
- If you have any questions, then think of them and we can answer them in the Q&A session after lunch.
Q&A Session

• Write your questions about the Year on one of the pieces of paper and hand it in.
• Then we will discuss the questions together.
Feedback

• We are still in the process of finalising the Year in Computing; we would appreciate your help.

• To finish, could you please write on one of the pieces of paper:
  • One thing that you think is good about the Year in Computing.
  • One thing that you would want to learn on the Year in Computing.
  • The main reason why the Year in Computing would be useful/interesting to you.
